# SPACE MANAGEMENT, NATURE'S WAY.

**Our Space Management System Does Something Nature Doesn't Do. It Increases DASD Performance While Reducing Cost In OS/VS Environments.**

Our Automated Space Management software—ASM2—is recognized by over 700 users worldwide as the leading high performance DASD management system.

ASM2 substantially improves system performance by archiving, restoring, backing up and migrating data. It provides comprehensive DASD analysis tools, plus a command facility that lets users enforce individual DASD management standards, customize formats, and determine their own reports. All with just one simple command.

ASM2 further increases efficiency with its data restoration facility, IXR (Intelligent Transparent Restore). We call it intelligent because you'll never again have to pre-check data set availability, or issue manual restore requests. What's more, IXR's unique look-ahead approach allows far more data to be archived and retrieved.

Best of all, ASM2 is so efficient at optimizing critical DASD space that it can easily pay for itself within a year.

For an on-site, on-line ASM2 demonstration with some of your own data, write or call John Williams direct. He'll be glad to show you how ASM2 can help you avoid those sticky space management problems.
